Warranty

Forest Kings Tub website · Last updated: 27 October 2026

1. Scope of the warranty

The warranty covers the entire product set, with the exception of the following components, which are subject to the specific conditions below: hydromassage system, LED lighting, hot tub liner, fibreglass cover and wood-fired stove.

The wooden base, steps, cladding and cup holder are subject to additional conditions (see section 2).

This commercial warranty is given by MB Europaletes, Vytauto g. 9, Meškučių k., LT-68129 Marijampolė, Lithuania, the manufacturer and seller of the product (“we”, “us”). The warranty period is **two years from the date of delivery**. The warranty applies in addition to your statutory warranty rights. It does not limit or replace those rights, which you can use free of charge regardless of this warranty. To make a claim, contact us at info@forestkings.com or +370 620 46372 with a description of the defect and photos.

2. Wooden base, steps, cladding and cup holder

Covered: only if the hot tub and all its components are kept in an enclosed space (for example a covered terrace with a roof), where the hot tub is not reached by moisture – rain, direct sunlight or snow – and the cladding and base are not sprayed with water.

Not covered: wood that is in contact with the elements (rain, snow, sun). Moisture can damage the cladding: it may swell, expand, shrink or warp, mould may appear and rot may set in. All of this is influenced by weather conditions.

3. Hydromassage / air system

Covered: the water pump, provided it shows no signs of wear or of mechanical damage, internal or external (for example an impeller broken by foreign objects).

Not covered: a pump that stopped working because of power surges, short circuit or unsuitable voltage.

4. LED lighting

Covered: the power supply unit.

Not covered: a power supply unit that stopped working because of power surges, short circuit or unsuitable voltage.

5. Hot tub liner and fibreglass cover

Covered: a crack in the hot tub (liner or cover) through all of its layers, i.e. where it starts to leak water. In such a case this is recognised as a manufacturing defect. All damage is assessed by us.

Not covered: cracks in the surface layer that do not prevent the hot tub or cover from functioning. These can result from incorrect use of the hot tub, such as foreign objects in the tub (glass containers, toys, etc.), sitting on places not intended for it (the edge of the liner), water left to freeze in the tub, walking in the tub with footwear, or the use of unsuitable cleaning chemicals. The same applies to incorrect removal, placement, storage or care of the fibreglass cover. All damage is assessed by us.

6. Wood-fired stove

Covered: if, after delivery of the hot tub with stove and after filling the tub (stove) with water, water starts to leak from the stove before it has been lit. We will deliver a new stove within a reasonable time agreed with the buyer.

Not covered: a stove that has already been lit, because a stove can crack if it is overheated (lit without water in it, or the water drained before the stove has cooled down) or if certain chemicals, such as chlorine, are used. The condition of the stove and the causes are assessed by us. The warranty does not apply to the chimney, the chimney guard or the chimney cap.

7. Thermal cover

Not covered: this is a component that wears out due to circumstances beyond our control – weather conditions and the forces of nature such as sun, frost, rain and snow.

8. General exclusions

The warranty also does not apply to defects or damage caused by any of the following:

- Use of the product other than for its intended purpose.
- Failure to comply with the operating and maintenance instructions.
- Use of unsuitable or poor-quality materials (for example burning coal in the stove, or cleaning the hot tub with unsuitable products).
- Natural wear and tear.
- Defects caused by limescale or iron deposits, contamination with sand, gravel or sludge, or foreign objects entering the pump.
- Product failure caused by temperatures higher or lower than those stated in our recommendations or instructions.
- Repair or modification of the product by third parties.
- The user did not inform us of the initial defect and continued to use the product despite the defect.
- The product does not belong to the original retail consumer.
- Wear of consumable parts, which is not considered a defect; warranty repair does not apply in this case.
- Force majeure (natural disaster, fire, lightning, direct sunlight, rain, snow, etc.) or other causes not attributable to the seller and beyond its control.

9. Our recommendations

To reduce the influence of circumstances that depend neither on us nor on you (sun, rain, forces of nature, snow, etc.), we recommend choosing thermally treated wood, plastic cladding or similar. Place the hot tub in a well-ventilated location (under a shelter, in a gazebo, on an open or enclosed terrace with a roof). If snow lands on the thermal cover (the insulated hot tub lid), it must be cleared off to reduce the load on the cover and protect it from breaking.

Do not place the hot tub directly on bare ground. Raise it so that the base does not come into direct contact with the ground, moisture or snow.

We advise impregnating the hot tub once a year with an impregnating agent of your choice or one recommended by us.

Do not clean the hot tub with acidic, alkaline, abrasive or chlorine-containing chemicals. Do not use acetone or thinners, as they will irreversibly change the appearance of the liner. Use only cleaning products intended for swimming pools.

To keep the stove and the whole hot tub in good condition for as long as possible, we do not recommend using chlorine, bubble products, foaming agents or similar products, as they affect the durability of the hot tub and all its equipment. Use only clean water with an iron content within the normal range and water that is not too hard, so that limescale does not form.
